SUMMARY

AI-focused full stack engineer specializing in generative AI and agentic systems, with hands-on experience building scalable LLM-powered platforms, multi-agent pipelines, and production backend architectures. Delivered systems involving orchestration, real-time workflows, and automated evaluation frameworks.

EXPERIENCE

Junior Full Stack AI Engineer Intern | Namekart (May 2026 - Present)

- Engineered production-grade multi-agent systems for domain acquisition and intelligent shortlisting using multi-stage pipelines, ranking algorithms, and domain quality parameters to automate large-scale decision workflows.
- Developed LLM evaluation and benchmarking pipelines to assess agent performance, optimize accuracy, and improve decision quality through iterative experimentation and continuous system refinement.
- Built and optimized scalable AI pipelines and backend services for high-throughput production workloads, focusing on performance, reliability, and efficient workflow orchestration.

Freelancer - AI Product Engineer | TZURONI LTD. (Mar 2026 - Apr 2026)

- Engineered a production-grade AI market intelligence platform using RAG pipelines, integrating SEC filings, social media data, sentiment analysis, and vector-based retrieval for context-aware insights.
- Built modular AI agents and scalable data pipelines for ingestion, preprocessing, semantic search, and LLM-powered conversational analytics with resilient fallback mechanisms and workflow orchestration.

PROJECTS

Quizzer - AI-Powered Secure Assessment Platform

Next.js, TypeScript, FastAPI, PostgreSQL, Redis, Celery, LangChain, LangGraph, Docker | Dec 2025 - Present | Live

- Architected Quizzer, an end-to-end AI assessment platform with 26 REST/WebSocket APIs and 24+ data models spanning exam creation, secure delivery, proctoring, auto-grading, live monitoring, analytics, and Google Classroom/Calendar/Drive integrations.
- Built a LangGraph content-to-exam pipeline ingesting PDF/DOCX/PPTX/images (Tesseract OCR), raw text, URLs, and YouTube captions; supports 5 question types with blueprint-driven batch generation, educator review/regeneration, and hybrid grading (instant objective scoring + LLM rubric evaluation for short/long answers) with professor-review fallback.
- Engineered server-authoritative exam integrity with Redis TTL timers (300s+ minimum duration), session locks, 30/min autosave, and 13 violation types (browser guards + client-side TensorFlow.js phone/face detection); streamed integrity events over WebSocket at <1 KB/s per student vs ~2 Mbps traditional video proctoring, protected by 15 Redis rate-limit policies across 4 algorithms (fixed/sliding window, token/leaky bucket).

Maantra - Multi-Channel AI Agent Platform

Python, FastAPI, Redis, PostgreSQL, LangChain, LangGraph, Docker | Nov 2025 - Present | Setup | GitHub

- Architected a platform-agnostic AI agent core with unified task coordination, persistent memory, and cross-platform identity management across Slack, Telegram, and WhatsApp with <300ms response time.
- Built scalable backend infrastructure with normalized messaging, lazy-loaded tools, and rate-limiting supporting 100+ concurrent conversations with 99.8% uptime.

SKILLS

Programming Languages: Python, Java, JavaScript, TypeScript, Rust

Core CS: System Design, OOP, DBMS, Operating Systems, Computer Networks

AI / ML: Deep Learning, Transformers, Generative AI, NLP, Prompt Engineering, Advanced RAG, Agentic AI

Frameworks & Libraries: FastAPI, LangChain, LangGraph, CrewAI, TensorFlow, PyTorch

LLM Evaluation: LangSmith, Langfuse, Ragas, DeepEval

Databases: PostgreSQL, MySQL, MongoDB, Redis

Cloud & DevOps: Docker, Kubernetes, GCP, Git, GitHub

EDUCATION

Amity University, Noida

Bachelor of Computer Applications (BCA)

2024 - 2027 (Expected)

CGPA: 8.7/10
